

Use «UseOffice .Net» library under Windows

You can easily use «UseOffice .Net» in any .NET application, because of the component is completely written in C# managed code.

1. Add dependencies through NuGet (optional).
2. Add the reference to UseOffice.dll.

1. Add dependencies through NuGet:

1. Open Microsoft Visual Studio and create a new project or open an existing
2. Solution Explorer Window → right click by "References" → Manage NuGet Packages...
→ In the tab "Browse" type "sautinsoft" and find the "sautinsoft.useoffice"

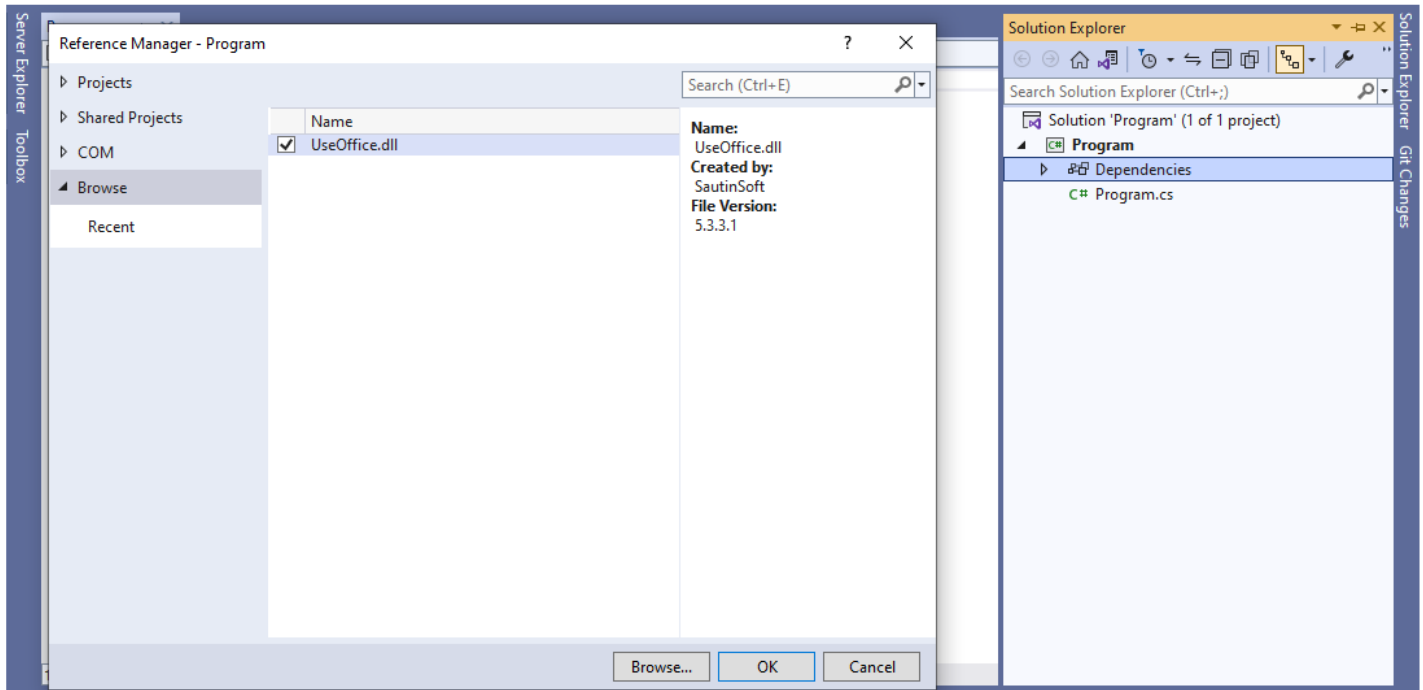

3. Select the desired version API and click "Install"

The selected API will be downloaded and referenced in your project.

Using Manage NuGet Packages you can also update UseOffice .Net to the desired version.

2. Add the reference to UseOffice.dll:

1. First of all, download the [UseOffice .Net](#) package. Unzip it at any place in your computer and find the assembly file "UseOffice.dll"
2. Open Microsoft Visual Studio and create a new project or open an existing project
3. Solution Explorer Window -> right click by "Dependencies" -> Add Project References
-> In the tab "Browse" find the "UseOffice.dll"

Note

UseOffice.dll assemblies compiled for **.NET Framework 4.6.2 - 4.8** are located inside (useoffice_net.zip -> UseOffice .Net (X.X.X.X)\Bin\.NET Framework X.X) folder.

UseOffice.dll assemblies compiled for **.NET 6 and up** are located inside (useoffice_net.zip -> UseOffice .Net (X.X.X.X)\Bin\.NET X.X) folder.

Now your application is able to convert documents between DOCX, RTF, PPTX, XLSX, PDF and other popular formats!
